Attempt : 1

Total Mark : 10

Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

Sesha is developing a weather monitoring system for a region with multiple weather stations. Each weather station collects temperature data hourly and stores it in a 2D array.

Write a program that can add the temperature data from two different weather stations to create a combined temperature record for the region.

Input Format

The first line of input consists of two space-separated integers N and M, representing the number of rows and columns of the matrices, respectively.

The next N lines consist of M space-separated integers, representing the values of the first matrix.

The following N lines consist of M space-separated integers, representing the values of the second matrix.

Output Format

The output prints the addition of the two matrices in N rows and M columns, representing the combined temperature record.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3 3

1 2 3

4 5 6

7 8 9

1 1 1

2 2 2

3 3 3

Output: 2 3 4

6 7 8

10 11 12

Answer

```
// You are using Java
import java.util.Scanner;
class main{
    public static void main(String args[]){
        int n,m;
        Scanner sc=new Scanner(System.in);
        n=sc.nextInt();
        m=sc.nextInt();
        int res[][]=new int[n][m];

        int arr[][]=new int[n][m];
        for(int i=0;i<n;i++){
            for ( int j=0;j<m;j++){
                arr[i][j]=sc.nextInt();
            }
        }
        int arr1[][]=new int[n][m];
```

```
for(int i=0;i<n;i++){
    for ( int j=0;j<m;j++){
        arr1[i][j]=sc.nextInt();
    }
}
for(int i=0;i<n;i++){
    for ( int j=0;j<m;j++){
        res[i][j]=arr[i][j]+arr1[i][j];
    }
}

for(int i=0;i<n;i++){
    for ( int j=0;j<m;j++){
        System.out.print(res[i][j]+" ");
    }
    System.out.println("\n");
}
}
```

Status : Correct

Marks : 10/10
